

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming is an essential step in project development that helps generate ideas, identify possible solutions, and choose the most effective approach to solve a problem. For this project, I analyzed the challenges involved in developing a Credit Card Approval Prediction System and explored different machine learning techniques that could improve prediction accuracy. I considered various aspects such as data preprocessing, exploratory data analysis, feature engineering, model selection, performance evaluation, and web application development. After carefully evaluating these ideas based on their feasibility, implementation complexity, and expected outcomes, I decided to build a Machine Learning-based Credit Card Approval Prediction System by training multiple classification models, comparing their performance using standard evaluation metrics, selecting the best-performing model, and deploying it through a Flask-based web application with a simple and user-friendly interface. This brainstorming and idea prioritization process helped me establish a clear development plan and ensured that the final solution effectively meets the project objectives.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm

Write down every possible idea related to the project.

Group Ideas

Group 1 – Data Preparation

- Data Collection
- Data Cleaning
- Duplicate Removal
- Missing Value Handling
- Feature Scaling

Group 2 – Data Analysis

- Dataset Exploration
- Data Visualization
- Statistical Analysis
- Correlation Analysis

Group 3 – Machine Learning

- Logistic Regression
- Decision Tree
- Random Forest
- Model Comparison

Group 4 – Deployment

- Flask
- HTML
- CSS
- Jolilib
- Prediction Dashboard

Step-3: Idea Prioritization
