

Customer Journey Map

FAIRPLANE

Credit Card Approval Prediction using Machine Learning

	1. Access Application	2. Enter Transaction Details	3. Data Processing	4. Prediction Result	5. Future Improvements
Actions What does the person typically do?	Open the web application Navigate to prediction page	Enter Time & Enter Amount Enter transaction features (V1-V28)	Submit fields & input validation Feature scaling (Time / Amount)	Random Forest prediction model View Genuine/ Fraudulent result	Save history & Cloud deployment Dashboard analytics setup
Interactions What touchpoints or integrations occur?	User interacts with browser	User enters transaction info	Flask connects to preprocess Flask loads trained model	Prediction sent back to user	Database backend integration Notification services layer
Goals & Motivations What is the primary goal or motivation?	Easy access to portal	Accurate data entry	Fast computational processing	Reliable real-time prediction	Better user experience
Positive Moments What steps does a typical person find enjoyable?	Simple interface Easy navigation	Responsive design	Fast processing	Accurate result	
Negative Moments What steps does a person find frustrating?		Incorrect values by user type Missing inputs	Invalid transaction data format	Prediction depends on trained model	Local deployment limitations
Areas of Opportunity How might we make each step better?	Add user authentication Mobile application	Real-time transaction monitoring	Explainable AI (XAI/SHAP) REST API integration	Connect database	Store prediction history Cloud deployment
