

Project Design Phase
Problem – Solution Fit Template

Date	3 JULY 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Problem – Solution Fit Template:

Problem–Solution Fit is an important step in understanding whether the proposed solution effectively addresses the identified customer problems. It helps analyze the target users, their challenges, current behavior, and the suitability of the proposed solution. For this project, the Problem–Solution Fit Canvas was prepared to identify the issues faced by financial institutions during the credit card approval process and to validate how a Machine Learning-based prediction system can improve decision-making, reduce manual effort, increase accuracy, and provide a faster and more reliable approval process.

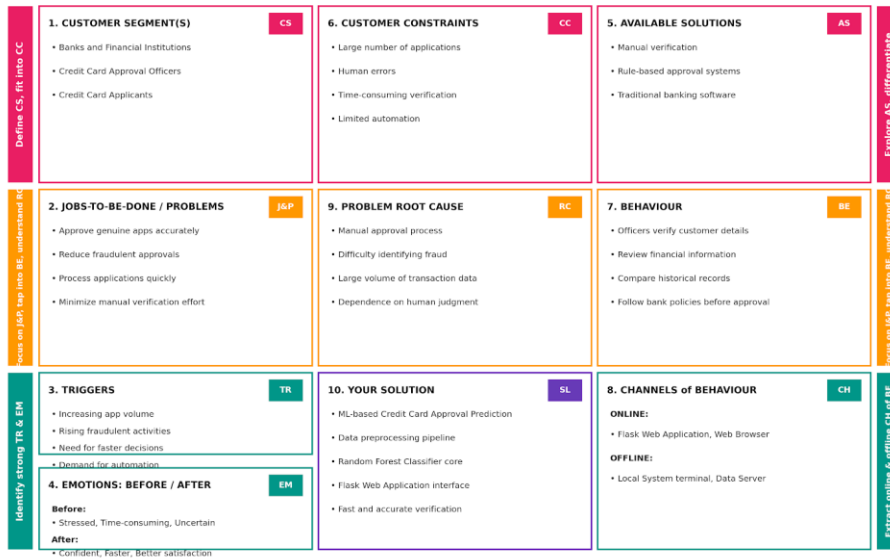

Purpose:

- ☐ To identify the key challenges faced by banks and financial institutions during the credit card approval process.
- ☐ To develop a Machine Learning-based solution that improves the accuracy and speed of credit card approval decisions.
- ☐ To reduce manual effort and minimize human errors by automating the prediction process.
- ☐ To provide a user-friendly web application that enables users to enter transaction details and receive prediction results efficiently.
- ☐ To understand the current approval workflow and propose an effective, reliable, and scalable solution that enhances decision-making and improves customer satisfaction.
